FitBuddy Project

Phase 4 – System Design

System Concept

FitBuddy can be organized as an input-to-AI-to-output workflow: user information → Gemini model processing → generated fitness-plan response.

Main Components

User interface, input handling, Gemini-based generation, and fitness-plan presentation.

Design Principle

Keep the generated result structured and understandable to the user.

Source Limitation

The supplied one-page PDF does not contain a detailed architecture diagram or implementation specification.
