FitBuddy Project

Phase 5 – Implementation

Implementation Focus

Implement the FitBuddy workflow using the technology and Gemini-model approach specified by the project reference.

Core Flow

Collect user inputs, prepare an appropriate prompt, send the request to the Gemini model, receive the generated response, and present the result clearly.

Development Note

Exact APIs, model names, code structure, and deployment steps should be taken from the referenced project document rather than invented from the one-page source PDF.
