FitBuddy Project

Phase 6 – Testing

Testing Goal

Check whether FitBuddy accepts the intended inputs and produces usable, properly structured fitness-plan responses.

Test Areas

Input validation, AI response generation, response readability, handling of incomplete inputs, and basic user-flow testing.

Expected Result

The system should complete the intended generation workflow without avoidable errors.

Source Limitation

The supplied PDF does not specify a formal test-case list, so detailed cases should be derived from the project reference document.
